## APPENDICES TO EXAM MATERIALS

1. Instructions for students at the station (Appendix 1)
2. List of practical skills (Appendix 2)
3. Sample task (Appendix 3)
4. Regulatory documents (Appendix 4)

### INSTRUCTIONS FOR STUDENTS AT STATION No. 5 “STANDARDIZED PATIENT IN THE CLINIC OF SURGICAL DENTISTRY AND MAXILLOFACIAL SURGERY”

THE FOLLOWING COMPETENCES ARE ASSESSED: collecting complaints and anamnesis; diagnosing the main symptoms and manifestations of emergency conditions in a dental clinic; providing emergency care in emergency conditions in a dental clinic; determining management and treatment tactics; performing medical manipulations on a standardized patient or on a mannequin.

The higher education (HE) candidate must greet and present the examiner with the identification number that was assigned during registration at the OSP(K)I. The candidate's response is videotaped at the station. The HE candidate receives a task according to a certain clinical scenario. Work at the station involves interaction with a tutor who plays the role of a standardized patient (mostly) or a medical professional, as indicated in the scenario.

Before starting communication with the tutor, the candidate is familiarized with the “Task for the student”. Then, he clearly performs all the items of the “Task” according to the following scheme.

Stages of work	Instructions
<b>Avoid focusing too much on one stage</b>	
Objective examination	Use the information provided in the condition. Conduct the examination according to the scenario conditions. A list of symptoms to monitor is provided after the table.
Manipulation	It is performed according to the algorithm presented in a separate appendix. For different tasks, it may apply to different stages of work (objective examination, provision of emergency care).
Determining management and treatment tactics	Provide the patient with the necessary position. Name the necessary manipulations and select the means for their implementation. Offer drug treatment in the form of prescriptions, indicate the doses and method of administration of the drugs. The list of means is given after the table.
Completion of the exam	Say goodbye to the patient. Confirm the completion of the tasks.

The duration of work at the station is 8 minutes.

After completing the task or the end of the time spent at the station, return the task to the teacher, wait for the signal about the end of the time spent at the station, leave the station. After the end of the time spent at the station, the examiner does not accept a response. The examiner is an observer of your actions and does not provide instructions, does not comment or question.

After passing the first station, the student must move to another station according to the route sheet. IT IS PROHIBITED to communicate with the examiner (except in cases related to safety issues, deterioration of well-being, unforeseen circumstances, etc.), use educational and auxiliary materials, use gadgets, transmit, copy, and distribute any information related to the exam and not publicly available. If a candidate for VO violates the above norms, his/her exam is terminated, and the grade for passing the exam is given as "failed" (violation of the rules of academic integrity).

1. Palpation of lymph nodes of the maxillofacial region and neck.
2. Bimanual palpation in pathology of the maxillofacial region and neck.
3. Palpation of the exit points of the trigeminal nerve on the face.
4. Finger method of mandibular anesthesia. Technique of execution. Zone of anesthesia. Indications for use. Possible complications.
5. Fingerless method of mandibular anesthesia. Technique of execution. Zone of anesthesia. Indications for use. Possible complications.
6. Torus anesthesia. Technique of execution. Zone of anesthesia. Indications for use. Possible complications.
7. Extraoral infraorbital anesthesia. Technique of execution. Zone of anesthesia. Indications for use. Possible complications.
8. Intraoral infraorbital anesthesia. Technique. Anesthesia zone. Indications for use. Possible complications.
9. Intraoral tubercular anesthesia. Technique. Anesthesia zone. Indications for use. Possible complications.
10. Select a set of instruments for removing teeth 11, 12, 21, 22 and their roots.
11. Select a set of instruments for removing teeth 13, 23 and their roots.
12. Select a set of instruments for removing teeth 14, 15, 24, 25 and their roots.
13. Select a set of instruments for removing teeth 16, 17, 26, 27 and their roots.
14. Select a set of instruments for removing teeth 18, 28 and their roots.
15. Select a set of instruments for removing teeth 31, 32, 41, 42 and their roots.
16. Select a set of instruments for removing teeth 33, 43 and their roots.
17. Select a set of instruments for removing teeth 34, 35, 44, 45 and their roots.
18. Select a set of instruments for removing teeth 36, 37, 46, 47 and their roots.
19. Select a set of instruments for removing teeth 38, 48 and their roots.
20. Extraoral extension of abscesses and phlegmon of the infraorbital area.
21. Extraoral opening of abscesses and phlegmon of the submandibular area.
22. Intraoral opening of abscesses and phlegmon of the infraorbital area.
23. Dissection of phlegmon of the floor of the mouth.
24. Dissection of abscesses and phlegmon of the submental area.
25. Dissection of abscesses and phlegmon of the buccal area intraorally.
26. Correction of anterior acute dislocation of the lower jaw according to Hippocrates.
27. Splinting according to S.S. Tigerstedt for fractures of the jaws and teeth with a smooth splint - bracket.
28. Intermaxillary splinting according to S.S. Tigerstedt for fractures of the jaws with a splint with hook loops.
29. Intermaxillary splinting according to S.S. Tigerstedt for fractures of the jaws with a splint with an inclined plane.
30. Intermaxillary splinting according to S.S. Tigerstedt for fractures of the jaws with a splint with a spreader bend.
31. Symptom of indirect loading in fractures of the lower jaw.
32. Symptom of indirect loading in fractures of the upper jaw.

## Appendix 3

### SAMPLE OF TASKS

#### Practical skills for station No. 5

Patient M, 42 years old, complains of pain in the right submandibular and sublingual areas, which increases during eating, periodic increase in body temperature to 37.6°C. He has been ill for 2 months. Objectively: infiltration along the sublingual ridge, hyperemia, swelling of soft tissues,

acute pain on palpation. Turbid saliva with pus is secreted from the duct of the right submandibular gland. Formulate the diagnosis and further treatment tactics.

№	Practical skills	Number of points per skill	Number of student points
Communication		1,5	
	(greetings, introductions, beginning and ending of communication)		
Formulate a diagnosis?		0,75	
	Submandibular salivary gland disease	0,25	
	Chronic sialodochitis of the right submandibular salivary gland	0,5	
Name the main symptoms that indicate this pathology?		1,5	
	Pain when eating	0,5	
	Cloudy saliva	0,5	
	Swelling and hyperemia of the gland mouth	0,5	
With which diseases should this disease be differentially diagnosed??		1,5	
	Chronic parenchymal sialadenitis	0,5	
	Chronic interstitial sialoadenitis	0,5	
	Acute sialadenitis	0,25	
	Sialolithiasis	0,25	
Name the surgical treatment method?		0,3	
	Dissection of the gland duct	0,15	
	Stone removal	0,15	
Ethical aspects		0,45	
	Maximum points per station	6,0	
	The amount of points the student scored
